```php
//CASE: SELECT

$g_db = new clsDB();

if( $g_db->isopen )
{
    $sql = "SELECT * FROM my_table";
    $data = $g_db->doSQL($sql);

    if( $data )
    {
        if( mysql_num_rows($data) > 0 )
        {
            //Presentation logic.
        }
        else
        {
            echo('No Data Found.');
        }
    }
    else
    {
        echo('The query failed due to an error: '.mysql_error());
    }
}
```

```php
//CASE: INSERT

$g_db = new clsDB();

if( $g_db->isopen )
{
    $sql = "INSERT INTO my_table(fld1, fld2)".
    " VALUES('123', 'fld2 data')";
    $data = $g_db->doSQL($sql);

    if( $data )
    {
        if( mysql_affected_rows($data) > 0 )
        {
            //Presentation logic.
        }
        else
        {
            echo('INSERT FAILED');
        }
    }
    else
    {
        //Error handling logic
        echo('The query failed due to an error: '.mysql_error());
    }
}
```
