## The PHP Anthology, Volume I

---

<https://sitepoint.com/bookstore/go/7/a723b6/>

Hello,

I'm surprised you didn't order 'The PHP Anthology, Volume I and Volume II' after downloading the sample chapters and reviewing the information I sent you. Not to mention the 25% saving we offer if you order directly through us.

Were the sample chapters not what you expected?

We're always keen to hear suggestions for improvements from our readers. Just reply to this email and let me know what we could have done better, and why you didn't buy.

Specific suggestions and insightful critiques are very helpful and always appreciated.

If we've done anything wrong, please let me know what it was, and I'll do whatever I can to help - that's what I'm here for!

I hope to hear from you soon. If not, I wish you all the best.

Kind Regards,

Adele Redan  
Customer Support  
SitePoint.com

P.S. If you've decide to order after all, the URL again is:

The work of a web developer is fundamental for assuring the required level of accessibility. The best choice is by far the adoption of standard such as XHTML and CSS (also for layout), but an accessible site can be built also with simple HTML. Whatever is your choice, the code must be valid. This means that you need the help of the graphic designer, because if they have built a very precise, complex and fixed template, you'll have a hard time reproducing it using only valid markup.

When you build an HTML template you have to use all of the tags and attributes available regarding accessibility:

when coding forms, use a rich set of tags to enhance accessibility  
 make sure that all meaningful graphics have text equivalents  
 don't use DHTML, Javascript or Applet if it's not strictly necessary (and if you use them, provide alternate access to the information)  
 include links that a user can click to skip repetitive regions of the page  
 use the right markup (don't leave h1-h6 on the shelves, use them)  
 the page has to be read also if CSS are turned off  
 use relative font size so a user can easily change them from the browser interface

create a logical tab order through links

Application Development

Every application used for publishing content on the site has to accept accessible input and has to produce accessible output. This is especially important for applications like CMS.

If this system doesn't accept alternative text and descriptions for multimedia (input), the page generated can't be considered accessible. On the other hand, if it produces a questionnaire using non standard HTML or without description labels, the page can't still be considered accessible. This is a key point for the accessibility of a medium/large scale web site.

You can spend a lot of time and energy developing accessible templates and content, but if the system doesn't manage them, all your efforts will be vanished.

Content Development

As a content manager, you need specific skills to produce accessible content. First of all, you need to know how to write for the web, because this skill is strictly related to web accessibility: use a clear and simple language, write short sentences, use the active form whenever possible, and so on. You can find a valuable resource reading Hot Text - Web Writing That Works.

Concerning web accessibility, the list of things to consider seems intimidating:

provide alternative text for images  
 write audio captioning and transcription  
 write video subtitling, captioning and transcription  
 insert data table supplementary information  
 use the right markup (paragraphs, heading, titles, keywords)  
 produce content that validates  
 use the title attribute whenever is applicable  
 specify changes in natural language

The above are the minimum requirements, but a good content manager needs to possess a general understanding of semantic, so that content can be organized, archived and presented to the user in different ways. provide

## Sun Micro seeks collaboration on Mustang development

<http://www.thehindubusinessline.com/2005/05/20/stories/2005052002430500.htm>

SUN Microsystems called upon Indian software developers on Thursday to contribute and actively participate in the development of Mustang, the next generation of Java. Mustang is the code name of the next major Java release.

Delivering the keynote address at the technology event 'SunTech Days' on Thursday, Mr Jeff Jackson, Sun Microsystems' Vice-President for Java Developer Platform and Strategy, invited the developer community to actively contribute to the development of Mustang.

Sun allows developers to contribute and participate in the development of the platform and review it, he said.

Stressing the need to work together and collaborate with the Java community, Mr Jackson said Indian developers could provide leadership, as efforts were being made to take Java to the next level.

Java was becoming more visible in development, Mr Jackson said, and added that developers like to see codes and check how to get their bugs fixed for Mustang.

Emphasising on India's role as a key contributor to the success of the Java, Mr Matt Thompson, Director of Technology Outreach, Sun Microsystems, told a press conference that collaboration of Indian developers was the key to the next level of Java.

India and China are the two countries where Sun is making most of its investments in building the developer base, he said. The Indian IT industry has evolved despite the Chinese Government pushing hard for the development of the IT sector there, he said.

<http://www.posr2.com>

Workers in the six Arab Gulf Cooperation Council states (GCC), whose number tolls 10 million persons, transfer 30 billion dollars annually to their countries, according to the minister of social affairs and labor in the United Arab Emirates Ali Bin Abdullah al-Kabi in statements issued on Thursday in Abu Dhabi.

The UAE minister stressed in a speech he delivered in the consultation conference for Asian labor force in Bali ( Indonesia ) that the "coming labor force to the GCC member states is temporary and not emigrants," stressing the key role played by this labor force in the economic developmental projects and building the basic infrastructure in our countries. He called on "close bilateral cooperation between labor exporting countries and the GCC member states and reaching an appropriate vision to protect the rights of arriving labor and its employees, taking into account problems facing the employers.

This comes following reports stating that about 1000 foreign workers, mostly Indians, walked off their job, and caused a protest because of not being paid for work they were doing in building an artificial island in the UAE. The UAE in that incident had ordered the employer to pay the wages or face penalty. A similar incident took place recently in Qatar.

According to a document by Giovanna Tattolo at the Jean Monnet Observatory on trans-Mediterranean relations (<http://jmobbservatory.eco.uniroma1.it/home.html>),

"The percentage of foreigners in the GCC populations systematically grew over the last decades, increasing from 22,9 percent in 1975 to over 38 in the mid-1990 when it levelled. By 2002, about 32,5 million people lived in the GCC. Among them were about 12,5 million foreigners, constituting 38,5 percent of the total population (see table 1). In Qatar, the UAE and Kuwait, foreigners constituted a large majority; in the UAE for instance, foreigners constituted almost 80 percent of the population.

In Saudi Arabia, Oman and Bahrain foreigners also made up a substantial portion of the total population: 26-40 percent." The report adds "With the post-1973 economic boom Yemenis, Egyptians, Sudanese, Jordanians/Palestinians, Pakistanis and Indians began to arrive in the Gulf in large numbers.

The report said: "At the beginning the Arab workers were very welcome, but, relatively quickly, the preference of the oil governments changed, and they began to be more open to Asian workers. They were less expensive to employ, easier to lay-off and thought to be more efficient, obedient and manageable.

"Asian workers were also preferable as they were used to leaving their families in their home countries, whereas Arab immigrants usually brought their families to the Gulf with the hope of settling there permanently. This possibility was not acceptable for the GCC authorities.

"Significant changes in the composition of the foreign workforce occurred as a result of the events of the second Gulf War. Iraqis and those supportive of Iraq (including Palestinians, Jordanians, Yemenis and Sudanese) were distrusted and forced to leave the GCC during and in the aftermath of the crisis. All together over 1.5 million people were displaced: up to one million Yemenis were expelled from Saudi Arabia, along 200,000 Jordanians and 150,000

Palestinians, mainly from Kuwait. An additional 158,000 Egyptians left Kuwait in the wake of the crisis.

"The economic effect of the return of a large number of workers from the GCC to their home countries due to developments related to the second Gulf war is unclear and needs further study. Many Arabs who left the GCC during the Gulf war and in its aftermath did not return following the conflict. The resultant vacuum in the labor market, despite the GCC governments' intentions, was not filled by nationals. Free market dynamics led Asians to take the vacant jobs, again enlarging again their share in the workforce. The workforce has witnessed further change in the 1990s, partly because of the end of the Cold War.

Job seekers from China and from the newly independent of the former Soviet Union began to arrive in the Gulf looking for employment opportunities. Cheap to employ and often quite well educated, these migrants created additional competition in the labor market. As a result of the policies adopted in the GCC, the percentage of the expatriate population represented by Arabs in these countries decreased from 72 percent in 1975 to 56 percent a decade later. The exact size of expatriate communities in the GCC is difficult to establish, as authorities often do not reveal information about them.

However, the available information suggests that of the 12.5 million foreigners, who lived in the GCC countries in 2002, there were about 3.5 million non-Gulf Arabs, 3.2 million Indians, 1.7 million Pakistanis, almost 1.0 million Bangladeshis, more than 700,000 Filipinos and more than 700,000 Sri Lankans. That is, the number of Asians was more than twice the number of non-Gulf Arabs. The non-Gulf Arab community has been mainly composed of Egyptians (over 1.5 million), Yemenis (1.0 million), Palestinian/Jordanians (0.5 million) and Syrians (0.3 million)."

## Testing By Development Team

fdfd

Here you will find the latest updates of the company activities. By sharing the current developments with within our team as well as with our investors and partners, we can maximize the strength of everyone reach and abilities to assist us in achieving our goals, engaging with additional advisors, and accelerating our success.

### Corporate Information

Distributed Capital exists to systematically and generally increase wealth opportunity and risk distribution through fundamental innovation that enables capital flows to overcome conventional boundary notions (whether a matter of scale, geography, socio-economics, policy or politics, structural regulation, market inefficiencies, or otherwise).

### Intellectual Property

King Henry IV awarded the world first patent in 1449. Five hundred and fifty-three years later Distributed Capital filed the first of its many patents around the world. The company has a developing patent portfolio that continues to be pursued around the globe, which covers all of the key developed financial markets and emerging market economies. The nature of our patents gives us coverage of more than 90% of capital transaction flows around the world, and presents a significant and maturing asset for the company. We will provide a comprehensive review and status updates of our Intellectual Property efforts in this section.
